CAN YOU STILL GET HOME INSURANCE IN CALIFORNIA?

Over 30% of homes in California are in wildfire-prone areas, and research has shown that wildfires can devastate communities and homes. Don't leave your clients vulnerable to this threat.

Fortress Fire uses AI and predictive modeling to provide practical, property-specific wildfire risk assessment.

This report defines the property's wildfire risk and recommends mitigation actions to meet regulatory requirements and will act as a pathway to insurance compliance.

For Seller Agents: No wildfire surprises. Use data to keep your seller protected.

For Buyer Agents: Be informed. Understand the cost to make a property AB 38 compliant.
